

BHARADWAJ AGRAHARAM

Coventry, UK | +44 7587 740190 | bharadwajagraharam98@gmail.com
Full UK Work Authorization | Full UK Driving Licence | Flexible for Shift Work

PROFESSIONAL SUMMARY

Cybersecurity postgraduate with hands-on experience in Security Operations Centre (SOC) monitoring, alert triage, and incident analysis. Skilled in identifying security threats, analysing system anomalies, and supporting incident response within SLA-driven environments. Strong foundation in risk assessment, digital forensics, and security governance (ISO 27001, GDPR). Proficient with SIEM tools including Splunk, and experienced in using threat intelligence platforms such as TryHackMe and LetsDefend. Seeking an entry-level SOC Analyst role to contribute to threat detection and organizational security.

TECHNICAL SKILLS

SIEM & Security Tools: Splunk SIEM, LetsDefend SOC Platform, TryHackMe, Wireshark, Nmap, Metasploit (basic)

Networking & Infrastructure: TCP/IP, DNS, DHCP, subnetting, OSI model, firewall concepts, IDS/IPS

Frameworks & Compliance: NIST Cybersecurity Framework, ISO 27001, GDPR, MITRE ATT&CK (awareness)

Digital Forensics: Disk and memory analysis, forensic investigation frameworks, incident timeline creation

Operating Systems: Windows (Event Logs, Active Directory awareness), Linux (command line basics)

PROFESSIONAL EXPERIENCE

EDVEDHA PVT LTD | SOC Analyst (Remote) Sep 2024 – May 2025 | Hyderabad, India

- Monitored and triaged high-volume security alerts and system workflow events, ensuring issues were resolved within SLA targets.
- Analysed performance trends and recurring security incidents to identify root causes, improving response efficiency and reducing repeat alerts.
- Coordinated with cross-functional teams to implement corrective actions, strengthen process reliability, and close incident response loops.
- Produced structured incident reports, dashboards, and escalation summaries for management review and decision-making.
- Supported process standardisation initiatives that improved documentation quality and team SOC response consistency.
- Operated effectively in a fast-paced, shift-based environment requiring rapid prioritisation and decision-making under pressure.

SHAREKHAN PVT LTD | Education Counsellor Dec 2022 – May 2023 | Chennai, India

- Managed high-volume client interactions while maintaining service quality and response turnaround standards.
- Maintained accurate operational records, documentation, and follow-up pipelines; tracked daily KPIs and adjusted workflows accordingly.

VERZEO EDUTECH PVT LTD | Business Development Associate Nov 2021 – Dec 2022 | Bangalore, India

- Led and coordinated a team of 10 members, assigning daily priorities, monitoring performance, and ensuring timely achievement of targets.
- Managed pipeline dashboards and performance reports to support management decisions; improved conversion efficiency through cross-team collaboration.

EDUCATION

MSc Cybersecurity – University of Hertfordshire, UK 2023 – 2025 | Grade: Commendation

Relevant modules: Information Security Management, Risk Assessment & Governance, Security Policy Development, Compliance & Regulatory Frameworks, Digital Forensics

BTech Computer Science & Engineering – JNTU Anantapur, India 2017 – 2021 | First Class

KEY PROJECTS

Hybrid Forensic Framework for Data Breach Analysis – University of Hertfordshire (May 2024 – Nov 2025)

- Developed a forensic investigation framework integrating disk and memory analysis tools to simulate and investigate data breach scenarios.
- Applied machine learning models to detect anomalous and suspicious behaviour patterns within large datasets.
- Created structured incident reports and forensic timelines to support end-to-end investigation workflows.

Home SIEM Lab – ELK Stack, Docker, Logstash, Kibana

- Designed and deployed a containerized SIEM environment using Elasticsearch, Logstash, and Kibana (ELK Stack) via Docker Compose for centralized log management.
- Built Kibana dashboards to monitor real-time web traffic, HTTP error rates (4xx/5xx), bytes distribution, and geo-sourced requests across multiple endpoints.
- Configured Logstash pipelines to parse, process, and forward logs from multiple sources into Elasticsearch for storage and analysis.
- Practiced threat detection, log correlation, and incident response workflows in a realistic, self-hosted SOC environment.

CERTIFICATIONS

- Junior Security Analyst Path – TryHackMe
- SOC Member – LetsDefend
- Certified Professional Ethical Hacker (CPEH) – Udemy
- SIEM: Event Management with Splunk Security – LinkedIn Learning
- Ethical Hacking: Vulnerability Analysis – LinkedIn Learning
